PROFESSIONAL SUMMARY

Oracle Certified Java SE 17 Developer with experience building RESTful backend services and migrating enterprise fintech applications to cloud-native Azure architecture at Oracle Financial Software Services. Hands-on experience with Java, Spring Boot, Spring Data JPA, Redis, SQL, REST APIs, transaction management and scalable backend application design. Passionate about distributed systems, backend engineering and building reliable production-grade applications.

EDUCATION

Vidyalankar Institute of Technology – University of Mumbai
Bachelor of Computer Engineering – CGPA: 9.78/10

Mumbai, India
2021 – 2025

EXPERIENCE

Oracle Financial Software Services

June 2025 – Present

Associate Technical Consultant

Mumbai, India

- Migrating 20 of 200+ fintech applications from a legacy 2-tier architecture to a cloud-native 3-tier Azure architecture. Developed RESTful APIs using Java following the MVC architecture, reducing report generation latency by **40%** (20–23 minutes to 12–14 minutes) with zero functional regressions.
- Proposed and helped build an AI-assisted migration workflow that reduced migration effort from nearly two weeks to approximately three days per application.
- Adopted by a team of **25 developers** after manager approval, significantly improving migration productivity across the program.
- Collaborated directly with client stakeholders to analyze legacy banking applications, translate business rules into technical requirements and support migration planning across **120+ applications**.

TIH-IoT @ IIT Bombay

Apr 2024 – Feb 2025

Project Fellow

Mumbai, India

- Co-authored the proposal that secured a **6 Lakh** research grant from the Department of Science and Technology, Government of India.
- Developed a multilingual sign language translation application using Python, OpenCV and MediaPipe achieving **83%** gesture recognition accuracy.

PROJECTS

Real-Time Payment Processing System – Java, Spring Boot, Spring Data JPA, Redis, MySQL

2026

- Built a payment transfer backend supporting secure account-to-account transfers using Spring Boot, MySQL and Redis.
- Implemented optimistic locking using `@Version` to prevent lost updates during concurrent transactions.
- Implemented idempotency keys to safely retry payment requests without duplicate transactions.
- Used `@Transactional` for atomic money transfers and rollback handling.
- Designed REST APIs with DTOs, Bean Validation, centralized exception handling and structured HTTP responses.
- Integrated Redis caching using `@Cacheable` and `@CacheEvict` to reduce repeated database access.

URL Shortener with Rate Limiting – Java, Spring Boot, Redis, MySQL

2026

- Built a high-throughput URL shortener using Redis cache-aside strategy, reducing read latency by **60%** and database load by **70%**.
- Designed a Base62 encoding algorithm for compact URL generation and implemented Redis Token Bucket rate limiting supporting **1000+ requests/minute** per user.

SKILLS

Languages: Java (OCP SE 17), SQL, Python

Backend: Spring Boot, Spring MVC, Spring Data JPA, Hibernate, REST APIs, Maven

Databases: MySQL, Redis, H2, PL/SQL

Cloud & Tools: Azure, AWS (Fundamentals), Git, GitHub, Maven, Postman, Swagger, GitHub Copilot

Core Concepts: OOP, Collections, Multithreading, Concurrency, Transactions, Bean Validation, Exception Handling, Caching, Microservices

CERTIFICATIONS

Oracle Certified Professional: Java SE 17 Developer

Oct 2025

Oracle Cloud Infrastructure Generative AI Professional

Sep 2025
