PROFESSIONAL SUMMARY

Oracle Certified Java SE 17 Developer with experience building RESTful backend services and supporting the modernization of enterprise applications from legacy architecture to cloud-native Azure architecture at Oracle Financial Software Services. Hands-on experience with Java, Spring Boot, Spring Data JPA, Redis, SQL, REST APIs, transaction management and scalable backend application design. Experienced in application migration, API development, debugging, testing and production-oriented backend engineering.

EDUCATION

Vidyalankar Institute of Technology – University of Mumbai
Bachelor of Computer Engineering – CGPA: 9.78/10

Mumbai, India
June 2021 – May 2025

EXPERIENCE

Oracle Financial Software Services

June 2025 – Present

Associate Technical Consultant

Mumbai, India

- Contribute to the migration and modernization of **200+ enterprise applications** from on-premises legacy environments to **Azure Cloud**, supporting application analysis, refactoring and cloud-readiness activities.
- Analyze existing applications and business workflows to identify migration requirements, dependencies and appropriate modernization approaches.
- Develop and integrate **RESTful backend services using Java and Spring Boot**, separating tightly coupled application components into maintainable service layers.
- Migrate and enhance existing business functionality, implement business logic, troubleshoot application issues and perform functional and integration testing during migration.
- Collaborate with client stakeholders and senior project leads to understand requirements, resolve technical issues and ensure successful application migration with minimal disruption.

PROJECTS

State Street PAM – Portfolio Accounting & Investment Management Migration

2026

Java, Spring Boot, REST APIs, Azure, SQL

- Project:** State Street PAM is a portfolio accounting and investment management system used by **insurers and asset managers** for portfolio reporting, fund accounting and reconciliation.
- Migration:** Modernized legacy PAM applications from a tightly coupled **2-tier architecture to a scalable 3-tier architecture** as part of the client's database and cloud migration initiative. Introduced REST APIs to separate the UI, business and database layers.
- Responsibilities:** Developed REST APIs using **Java and Spring Boot**; migrated existing functionality and business logic; integrated APIs with application components; performed debugging, testing and validation; and supported Azure deployment and configuration.
- Delivery:** Contributed to the end-to-end migration and delivery of **15+ applications over a 7-month engagement**, collaborating with State Street project leads and senior stakeholders.
- Performance:** Improved report-generation performance by approximately **40%**, reducing execution time from **20–23 minutes to 12–14 minutes**, while maintaining existing functionality.

SKILLS

Languages: Java (OCP SE 17), SQL, Python

Backend: Spring Boot, Spring MVC, Spring Data JPA, Hibernate, REST APIs

Databases: MySQL, H2, PL/SQL

Messaging & Caching: Apache Kafka, Redis

Cloud & Tools: Azure, AWS (Fundamentals), Git, GitHub, Maven, Postman, Swagger, GitHub Copilot

Core Concepts: OOP, Collections, Multithreading, Concurrency, Transactions, Bean Validation, Exception Handling, Microservices

CERTIFICATIONS

Oracle Certified Professional: Java SE 17 Developer
Oracle Cloud Infrastructure Generative AI Professional

October 2025
September 2025
